GLASS

With the unquestionable ruggedness of our actuators, Jordan Controls can meet any actuator requirement for virtually any glass manufacturing application. Along with this durability comes accuracy and reliability, ensuring the precision necessary for your critical control applications in a harsh environment. Jordan Controls actuators have been used extensively in these typical glass manufacturing applications:

- Dampers
- Cooling Water Systems
- Air Handling Devices
- Pressure Control Valves

Whatever the application, no matter how difficult and demanding the conditions, we know that accuracy and efficiency are essential at all times. With operating temperature up to 225° F (107° C), our actuators are designed and built to perform perfectly under the most exacting requirements.
